User:

export data testing

Chatgpt:

Got it?can you say a bit more about what you?re testing?

Do you mean exporting data from something (like a database, app, or API) for testing, or testing an export feature itself?

Quick options you can pick from:

? Source: database / backend API / frontend app / spreadsheet?

? Format: CSV, JSON, Excel, SQL dump, something else?

? Goal: unit tests, QA/manual testing, performance testing, or data migration?

Reply with a couple of words (e.g., ?API ? CSV for QA?), and I?ll jump straight in.
